MINDUCTION Of alkaline phosphatase in mouse L cells by overexpression of the catalytic subunit of cAMP-dependent protein kinase.";
J. Biol. Chem. 265:13181-13189(1990).
-! CATALYTIC ACTIVITY: An orthophosphoric monoester + H(2)O = an alcohol + phosphate.
-! SUBUNIT: HOMODIMER.
-! SUBUNIT: HOMODIMER.
-! SUBUNIT: MAMMALS THERE ARE FOUR DIFFERENT ISOZYMES: PLACENTAL, PLACENTAL-LIKE, INTESTINAL AND TISSUE NON-SPECIFIC (LIYER/BORE) KIDDER.

Genome 7:856-857(1996).

-I-FUNCTION: DIVALENT TRANSITION METAL (IRON AND MANGANESE)
TRANSPORTER INVOLVED IN IRON METABOLISM AND HOST RESISTANCE TO
TRANSPORTER INVOLVED IN IRON METABOLISM AND HOST RESISTANCE TO
CERTAIN PATHOGENS. MACROPHAGE-SPECIFIC MEMBRANE TRANSPORT
FUNCTION: CONTROLS NATURAL RESISTANCE TO INFECTION WITH
INTRACELLULAR PARASITES PATHOGEN RESISTANCE INVOLVES SEQUESTRATION
OF FE2+ AND MN2+, COFACTORS OF BOTH PROKARYOTIC AND EUKARYOTIC
CATALASES AND SUPEROXIDE DISMUTASES, NOT ONLY TO PROFECT THE
MACROPHAGE AGAINST ITS OWN GENERATION OF REACTIVE OXYGEN SPECIES,
BUT TO DENY THE CATIONS TO THE PATHOGEN FOR SYNTHESIS OF ITS
PROTECTIVE ENZYMES (BY SIMILARITY).

-!- SUBCELLULAR LOCATION: Integral membrane protein (Probable).

CD8 at 2.6 A resolution.

CD8 at 2.6 A resolution.

CEL 68:1145-1162(1992).

I FUNCTION: IDENTIFIES CYTOXIC/SUPPRESSOR T-CELLS THAT INTERACT WITH MHC CLASS I BEARING TARGETS. CD8 IS THOUGHT TO PLAY A ROLE IN WITH MHC CLASS I MHC MOLECULES ALPHA-3 DOMAINS.

CLASS I MHC MOLECULES ALPHA-3 DOMAINS.

CLASS I MHC MOLECULES ALPHA-3 DOMAINS.

I SUBCLIULAR LOCATION: Type I membrane protein.

LINKED BY TWO DISULFIDE BONDS. CAN ALSO FORMS HOWODIMERS.

I SUBCLIULAR LOCATION: Type I membrane protein.

CTOPLASMIC DOMAINS: VARIOUS PATTERNS OF DIFFERENTIAL SPLICING

OF CD8 ALPHA TRANSCRIPTS INVOLVE EXCISION OF THE TRANSMEMBRANE OR

CYTOPLASMIC DOMAINS: OF THE FIVE MOST CARBOXYL-TERMINAL CYSTEINES ARE USED TO

FORM INTER-CHAIN DISULFIDE BONDS IN DIMERS AND HIGHER MULTIMERS,

HILLE THE FOUR AMINO-TERMINAL CYSTEINES AND HIGHER MULTIMERS,

HILLE THE FOUR AMINO-TERMINAL CYSTEINES AND HIGHER MULTIMERS,

HILLE THE FOUR AMINO-TERMINAL CYSTEINES AND HIGHER MULTIMERS,

CI-SIMILARITY: BLEDONS TO THE IMMUNOGLOBULIN SUPERFAMILY.

CI-SIMILARITY: CONTAINS I IMMUNOGLOBULIN-LIKE V-TYPE DOMAIN.

-!- FUNCTION: INVOLVED IN PROTEIN EXPORT. INTERACTS WITH SECA AND SECE TO ALLOW THE TRANSLOCATION OF PROTEINS ACROSS THE PLASMA MEMBRANE, BY FORMING PART OF A CHANNEL.

-!- SUBUNIT: ONE OF SEVEN SECRETORY PROTEINS (SECA-F & SECY) THAT COMPRISE THE PROKARYOTIC PROTEIN TRANSLOCATION APPARATUS.

-!- SUBCELLULAR LOCATION: Integral membrane protein.

-!- SIMILARITY: BELONGS TO THE SECY/SEC61-ALPHA FAMILY.

-!- FUNCTION: THIS IS A COMPONENT OF THE PHOSPHOENOLPYRUVATE-DEPENDENT
-!- FUNCTION: THIS IS A COMPONENT OF THE SUGAR PHOSPHOTRANSFERASE SYSTEM (PTS), A MAJOR CARBOHYDRATE ACTIVE
-TRANSPORT SYSTEM. THE IICD DOMAINS CONTAIN THE SUGAR BINDING SITE
AND THE TRANSMEMBERARE CHANNEL, THE IIA DOMAIN CONTAINS THE PRIMARY
PHOSPHORYLATION SITE (THE DONOR IS PHOSPHO-HPR): IIA PRANSFERS ITS
PHOSPHORYL GROUP TO THE IIB DOMAIN WHICH FINALLY TRANSFERS IT TO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Mcclelland M., Sanderson K.E., Spieth J., Clifton S.W., Latreille P., Courtney L., Porwollik S., Ali J., Dante M., Du F., Hou S., Layman D., Leonard S., Nguyen C., Scott K., Holmes A., Grewal N., Mulvaney E., Ryan E., Sun H., Florea L., Miller W., Stoneking T., Nhan M., Waterston R., Wilson R.K.;

"Complete genome sequence of Salmonella enterica serovar Typhimurium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 THE SUGAR.

CATALYTIC ACTIVITY: Protein N-phosphohistidine + sugar = protein histidine + sugar phosphate.

SUBCELLUIAR LOCATION: Integral membrane protein. Inner membrane. MISCELLANEOUS: THIS ENYME IS ALSO A CHEMORECEPTOR MONITORING THE ENVIRONMENT FOR CHANGES IN SUGAR CONCENTRATION.
                                                                                                                                                                                                                                                                                                                                                                                               (Glucose-
BC component)

Submitted (OCT-1996) to the EMBL/GenBank/DDBJ databases.

LEUNCTION: DIVALENT TRANSITION METAL (IRON AND MANGANEE)

TRANSPORTER INVOLVED IN IRON METABOLISM AND HOST RESISTANCE TO CERTAIN PATHOGENS. MACROPHAGE-SPECIFIC MEMBRANE TRANSPORT

FUNCTION: CONTROLS NATURAL RESISTANCE TO INFECTION WITH

INTRACELLULAR PARASITES PATHOGEN RESISTANCE INVOLVES SEQUESTRATION

OF FE2+ AND MN2+, COFACTORS OF BOTH PROKARYOTIC AND ENKARYOTIC

CATALASES AND SUPEROXIDE DISMUTASES, ONT ONLY TO PROTECT THE MACROPHAGE AGAINST ITS OWN GENERATION OF REACTIVE OXYGEN SPECIES,

BUT TO DENY THE CATIONS TO THE PATHOGEN FOR SYNTHESIS OF ITS

PROTECTIVE BUSYNES (BY SIMILARITY).

CHICARRANIAN LOCATION: INTEGRAL MEMBRANE PAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This SWISS-PROT entry is copyright. G49349 cuclinoglycan transport protein ExoT - Rhizobium mellloti
C; Species: Rhizobium malloti
C; Species: Rhizobium malloti
C; Species: Rhizobium malloti
C; Species: Rhizobium malloti
C; Date: 03-May-1994 #sequence_revision 03-May-1994 #text_change 17-Mar-2000
C; Accession: C4934
B; Glucksmann, M.A.; Reuber, T.L.; Walker, G.C.
J. Bacteriol. 175, 7045-7055, 1993
J; Tille: Genes needed for the modification, polymerization, export, and processing on A; Reference number: A49349; MulD:94042870
A; Retars: preliminary
A; Status: preliminary
A; Molecule type: DNA
A; Residues: 1-494 <GLU>
A; Residues: 1-494 <GLU>
C; Superfamily: hypothetical protein
C; Keywords: transmembrane protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              probable transport protein, similar to Wax exoT [imported] - Sinorhizoblum mellloti C; Species: Sinorhizoblum mellloti C; Species: Sinorhizoblum mellloti C; Species: Sinorhizoblum mellloti C; Species: 24-Aug-2001 #sequence_revision 24-Aug-2001 #text_change 30-Sep-2001 C; Accession: B95976 R; Finan, T.M.; Weidner, S.; Wong, K.; Buhrmester, J.; Chain, P.; Vorholter, F.J.; Herproc. Natl. Acad. Sci. U.S.A. 98, 9889-9894, 2001

D83934

hypothetical protein BH2276 [imported] - Bacillus halodurans (strain C-125)

C; Specias: Bacillus halodurans

C; Specias: Bacillus halodurans

C; Date: 01-Dec-2000 #sequence_revision 01-Dec-2000 #text_change 15-Jun-2001

C; Accession: D83934

R; Takani, H.; Nakasone, K.; Takaki, Y.; Maeno, G.; Sasaki, R.; Masui, N.; Fuji, F.; H

Nucleic Acids Res. 28, 4317-4331, 2000

A; Title: Complete genome sequence of the alkaliphilic bacterium Bacillus halodurans a

A; Reference number: A83650; MUID: 20512582; PMID: 11058132

A; Accession: D83934

A; Status: preliminary

A; Molecule type: DNA

A; Residues: 1-392 <STO>
                                                                                                                                                                                                                                                                                                                                                                                                                                                      A;Cross-references: GB:AP001515; GB:BA000004; NID:g10174886; PIDN:BAB05995.1; GSPDB:GA:Experimental source: strain C-125

                                                                                                                                                                                                                      myosin-heavy-chain kinase (EC 2.7.1.129) - slime mold (Dictyostellum discoideum)
C; Species: Dictyostellum discoideum
C; Species: Dictyostellum discoideum
C; Date: 21-Sep-1993 #sequence_revision 25-Apr-1997 #text_change 17-Apr-1998
C; Accession: 446136
R; Ravid, S: Spudich, J.A.
Proc. Natl. Acad. Sci. U.S.A. 89, 5877-5881, 1992
A; Title: Membrane-bound Dictyostellum myosin heavy chain kinase: a developmentally regul A; Reference number: A46136
A; Accession: A46136
A; Accession: A46136
A; Status: preliminary
A; Molecule type: mRNA
A; Residues: 1-783 <RAV>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1.5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A)Cross-references: GB.M93393; NID:g167827
